

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

PHILOSOPHICAL TRANSACTIONS.

Munday, April 2. 1666.

The Contents.

A Confirmation of the former Account, touching the late Earthquake near Oxford, and the Concomitants thereof, by Mr. Boyle. Some Observations and Directions about the Barometer, communicated by the same Hand. General Heads for a Natural History of a Country, small or great, proposed by the same. An Extract of a Letter, written from Holland, about Preserving Ships from being Worm-eaten. An Account of Mr. Boyle's lately publish'd Treatise, entituled, The Origine of Forms and Qualities, illustrated by Considerations and Experiments.

A Confirmation of the former Account touching the late Earthquake near Oxford, and the Concomitants thereof.

His Confirmation came from the Noble Mr Boyle in a Letter, to the Publisher, as followeth:
As to the *Earthquake*, your curiosity about it makes me sorry, that, though I think, I was the first, that gave notice of it to several of the *Virtuosi* at *Oxford*; yet the Account, that I can send you about it, is not so much of the *Thing* it self,

as of the *Changes of the Air*, that accompanied it. To inform you of which, I must relate to you, that riding one Evening somewhat late betwixt *Oxford* & a Lodging, I have at a place, 4. miles distant from it, the weather having been for a pretty while Frosty, I found the Wind so very cold, that it reduced me to put on some defensives against it, which I never since, nor, if I forget not, all the foregoing part of the Winter was obliged to make use off. My unwillingness to stay long in so troublesome a Cold, which continued very piercing, till I had got half way home-ward, did put me upon galloping at no very lasty rate; and yet, before I could get to my Lodgings, I found the Wind turned, and felt the Rain falling; which, considering the shortness of the time, and that this Accident was preceded by a settled Frost, was surprizing to me, and induced me to mention it at my return, as one of the greatest and suddainest Alterations of Air, I had ever observ'd: And what changes I found, have been taken notice of in the *Gravity of the Atmosphere* at the same time by that Accurate Observer * Dr.

* See Num. 10. Phil. Transactions p. 166--171; at the time of the printing whereof, this Relation of Mr. Boyle was not yet come to hand.

Wallis, who then suspected nothing of what follow'd; as I suppose, he has ere this told you himself. Soon after, by my guess about an hour, there was a manifest Trembling in the House where I was (which stands high in comparison of *Oxford*.) But it was not there so great, but that I, who chanced to have my thoughts busied enough on other matters, than the weather, should not have taken notice of it as an *Earth-quake*, but have imputed it to some other cause, if one, that you know, whose hand is employed in this Paper, and begins to be a diligent observer of Natural things, had not advertis'd me of it, as being taken notice of by him and the rest of the people of the House. And soon after there hapned a brisk Storm: whereupon I sent to make inquiry at a place call'd *Brill*, which standing upon a much higher ground, I supposed might be more obnoxious to the effects of the *Earth-quake* (of which, had I had any suspicion of it, my having formerly been in one neer the *Lacus Lemanus*, would have made me the more observant;) But the person I sent to, being disabled

disabled by sickness to come over to me (which he promis'd to do, as soon as he could) writ me only a *Ticket*, whose substance was, That the *Earth-quake* was there much more considerable, than where I lodged, and that at a Gentlemans house, whom he names (the most noted Person, it seems, of the neighbourhood) the House trembled very much, so as to make the Stones manifestly to move to and fro in the Parlour, to the great amazement and fright of all the Family. The Hill, whereon this *Brill* stands, I have observ'd to be very well stor'd with Mineral substances of several kinds; and from thence I have been inform'd by others, that this *Earth-quake* reach'd a good many miles; but I have neither leasure, nor inclination to entertain you with uncertain reports of the Extent and other Circumstances, especially since a little further time an inquiry may enable me to give you a better warranted account.

Some Observations and Directions about the Barometer, communicated by the same Hand, to the Author of this Tract.

These shall be set down, as they came to hand in another Letter; *videl.*

As to the *Barometrical* Observations (as for brevities sake I use to call them) though you * guess'd aright, that, when I saw those of the Learned and Inquisitive Dr. *Beale*, I had not Mine by me, (for I left them, some years since, in the hands of a *Virtuoso*, nor have I now the leasure to look after those Papers;) yet since by the Communication, you have made publick, 'tis probable, that divers Ingenious men will be invited to attempt the like Observations, I shall (notwithstanding my present haste) mention to you some particulars, which perhaps will not appear unseasonable, that came into my mind upon the reading of what you have presented the Curious.

When I did, as you may remember, some years agoe, publickly express and desire that some Inquisitive men would

* See Num. 9. of the Phil. Transact. p. 159. the last paragraph.
